Dear Parents

Maths Year 7-9 Finance Activity

We would like all of our students in Year 7-9 to look at maths in the context of finance; a part of their future lives where their numerical skills will be important to them.

Your student will have received a school email with materials attached. You will find in the set of materials a

- Home learning guide
- Activity 1 Planning to Buy (and help pages 38-9)
- Activity 2 Insurance (and help pages 112-5)

These should explain to you the basic ideas of finance to consider and give you the materials to be able to explain and run the tasks. If you have more than one student in Year 7-9 the intention is they complete this as a group activity and share ideas.

We would like all of the students to have looked at the scenarios set in the two activities and to feel they have some understanding of budgeting and insurance.

You will also find some information about Further Support and Resources-Secondary, which will give you some further ideas you may want to follow up during the summer break.

We hope both you and your family benefit from looking at these activities and that they generate positive and useful discussions around finance. In the Home Learning Guide you will see other suggestions of activities you can do with them during your daily lives at home.

If you have any questions please get your student to contact their teacher via email in the usual way.
