Task 5 A6 revision cards task

For this task you will need some A4 paper plain or coloured, which you fold in half widthways and lengthways to make an A6 sized card. You can then cut along the folded lines to make an A6 card (see below).

Now you will need to fill one side of the card with revision notes about a topic that you are not sure about. The example shown below is for fractions and has included worked examples to help me to remember! You can make yours stand out by adding diagrams and colour as this will help you remember key information
